IT Critine

November 18, 2019

Opportunities are like sales, they're limited time offers that come and go to make your life easier. We are all here for the same reason to pursue our career to get a degree and minor/major in IT. This presentation is selling myself on why I should continue to be in IT Critine next semester. During this presentation I will be demonstrating three main points. The purpose of why I chose this as a major, how can I contribute to help and work in groups and how can this experience benefit me.

I had chosen my major career field at the age of 12 and declared what I wanted my major to be in the 11th grade. So I already convinced myself that this is something I want to do. While in High school I had taken many computer elective classes to go towards my transcript. I was selected to be a part of AVID, which is a college preparatory readiness program. My instructors were at Dunbar Middle School( Donald Porter) and transferred to Little Rock Central High(Stacey McAdoo). This program taught me how to be professional in interviews, what should be expected on college campuses, and how to fill out resumes. We were assigned to do job shadows and interviews. I job-shadowed Mr. Alveno Smith, an Information Technology Trainer from UA Little Rock. He showed me what's expected for this position. I asked him questions and he gave very good answers on what is expected to happen while doing this

profession. He explained to me that sometimes a website can crash if it is not linked correctly or it can sometimes produce viruses.

How can I contribute to work in groups and how can this benefit me? I am very responsible and involved when it comes to group assignments and presentations. This can benefit me to be a part of a team working in groups because sometimes jobs may require you to work with a partner and try to be involved with coworkers .

In conclusion, I have had many background experiences for this major and want it to be useful when I transition to the next course in the spring semester. My interest in Information Technology and Web Designing motivates me to pursue this course. My Goal is to learn how to be a great Web Designer and be able to contribute to group projects next semester. I have discussed how I discovered this major and what I did to prepare myself, how can working in group projects benefit me, and how I can contribute to working in groups.
